SUMMARY

Senior frontend engineer (since 2018) for complex production web applications. I build React / Next.js / TypeScript UIs for real-time trading, crypto and fintech products, multi-role dashboards, and data-heavy admin tools — with WebSocket, Socket.io, and SignalR wired into reliable client state (Redux, Zustand, TanStack Query). Freelance frontend: owns the frontend implementation from landing through authenticated product surfaces; other tech and design members are a team. Building with NestJS on small practice projects — learning the backend path, not a shipped production backend.

SKILLS

Core JavaScript, TypeScript, React.js, Next.js

State & data Redux, Zustand, REST API, WebSocket (Socket.io, SignalR), TanStack Query

UI Tailwind CSS, Radix UI, ShadCN, Material UI, Ant Design, SCSS

Tools Git, Agile / Scrum

AI (project-scoped) OpenAI, Llama, image processing

Building with NestJS, Node.js backend patterns

EXPERIENCE

Graphay

Sep 2025 – Present

Frontend Developer, Freelance

Remote

- Frontend development for Graphay React products — production web applications across AI-assisted and product surfaces.

Techsnovel

Oct 2024 – Sep 2025

Frontend Developer, Contract

Remote · Sari, Mazandaran, Iran

- Frontend for an AI shopping-guide bot for e-commerce stores, shipped as a Wix plugin (teechats.com). The bot uses the store's products plus defined rules and extra rules the merchant adds so guidance is store-specific — to speed sales and walk the customer through buying.
- Real-time chat UI with SignalR — typing indicators, message queue, and RBAC-aware roles (React, TypeScript, Zustand). Separate engagement from Graphay Octopus work.

Graphay

May 2023 – Dec 2024

Frontend Developer, Part-time

Remote

- As a freelance frontend developer I built the full frontend for arz.me myself — public landing and authenticated exchange app (wallet, buy/sell, live prices, support) — through barman-tech / Graphay; other disciplines were a team. Socket.io market feeds; Next.js, TypeScript, Zustand, TanStack Query.
- Octopus AI — Graphay freelance product, ChatGPT-like but more specialized at the time: generate video, Excel files, and research, plus plugins added by writing Python scripts (when that was not yet trivial in ChatGPT).
- Frontend for other Graphay AI work (Llama / OpenAI chat UIs and image-processing integrations).
- Adgame Telegram mini-app (miniapp.adgame.fun): Telegram SDK, TON Connect wallet UI, ads / referral / leaderboard (React, Vite, Zustand, TanStack Query).
- Detifi — a Graphay AI crypto-research product (insights, chatbot, landing) that was stopped; same founder as Graphay. Frontend only — not a separate employer.

Takanesh Academy

May 2023 – Aug 2023

Frontend Developer, Part-time

Tehran, Iran

- Implemented Figma designs, features, and performance fixes on existing product UI; image-transform / canvas work and related asset flows for an image-generation product aimed at Iranian users.

Arsalweb Startup Development CO.

Frontend Developer, Contract

Jul 2022 – Feb 2023
Remote · Khuzestan, Iran

- Built the Ronda24 hypermarket PWA (Arsal Web) with Next.js and Tailwind: customer shopping plus organization and logistics panels.
- Implemented organization-management UI and a statistics panel (daily / weekly / monthly sales, open orders, customers, revenue).
- Shipped two PWA features — shopping history and repurchase of a previous cart.
- Refactored and debugged production panels (live ops, monitoring, inventory) and conversion-focused landing pages.

PARSDATA

Frontend Developer, Contract

Feb 2022 – Aug 2022
Tehran Province, Iran

- Frontend for the parsdata.com marketplace: listings, seller dashboard, and multi-step checkout (React, Next.js, TypeScript) — marketplace UI, not the company's hosting / CMS product line.

Mark It Done

Frontend Web Developer, Contract

Dec 2020 – Nov 2021
Los Angeles, CA, United States

- Frontend for client work in a design / dev / PM team (markitdone.com): WordPress themes and plugins, Shopify storefronts, and custom software UI — as a frontend contributor, not the agency.

SELECTED PROJECTS

Crypto Exchange — arz.me

Freelance frontend: I built the full arz.me frontend myself (landing + authenticated exchange) through barman-tech / Graphay; other disciplines were a team. Socket.io live markets. Next.js, TypeScript, Zustand, TanStack Query.

Crypto Exchange — xpay.co

Contributed user trading SPA (app.xpay.co), ops admin, and public digital receipts (viral-team) — not a sole from-scratch build. Still supporting features, bugfixes, and frontend improvements. SignalR, Redux Toolkit, Ant Design; RTL and Jalali UX.

Multi-Panel E-Commerce

Admin, warehouse, basket-picker, postman, storefront, and PWA on one shared order domain. Next.js, Redux, TypeScript. Confidential client work (NDA) — no public marketing URL and no client name.

Additional production work

SwapNet (swapnet.app): full frontend, still supporting. VisaPay (visapay.me) and xpay.co: historical contribution plus ongoing tech-side support. Also Adgame (miniapp.adgame.fun), Ariascale (ariascale.ir), PSPro (pspro.ir), Ketabfeed (ketabfeed.com), and internal exchange UI (EppoChange).

EDUCATION

Bachelor of Software Engineering — HADAF University of Mazandaran (2015)

ADDITIONAL

Languages: Persian (native), English. Six LinkedIn recommendations.
